

Hunting Annular Pressure Relief System (APRS) Connection Technology | APRS

Features

- Patented technology
- Produced, tested and installed in accordance with Hunting's Total Quality Management processes and procedures
- Securely built into casing coupling
- Precisely calibrated to rupture at pre-selected pressure and temperature threshold

Benefits

- Cost-effective means for reducing potential casing collapse from pressure exceeding the normal or expected range
- Ideal for deepwater casing strings where annular pressure buildup is a concern
- Custom applications and configurations available upon request

Hunting's APRS employs established "burst disc" technology to help manage annular pressure buildup (APB).

Proven extensively in deepwater applications worldwide, Hunting's APRS technology is an economical solution for preventing catastrophic structural well failure versus other APB mitigation options.
